VOC REQUIREMENTS IN VARIOUS PRODUCTS FOR CALIFORNIA USA

In USA, **volatile organic compounds (VOC)** are legally defined in various laws and codes. The United States Environmental Protection Agency (EPA) regulates VOCs in the air, water, and land.

In California, there are requirements on volatile organic compounds (VOC) in various products and different methods are employed.

US EPA Method 24 is used for determination of VOC in samples such as paints, printing inks, and adhesives. On the other hand, CARB Method 310 is used for various types of consumer products which include:

Air fresheners	Odour remover
Artist solvent and thinner	Floor wax
Fabric care products	Aerosol cooking sprays
Cleaners (e.g. bathroom, tile, cooktop, others)	Office supplies (e.g. correction fluid)

And in the designated methods, a number of test parameters are to be determined such as volatile content, low vapour pressure VOC (LVP-VOC), ammonia and exempt compounds.

SGS Hong Kong is capable to provide **VOC** test service on both methods and various product categories to fulfil your needs to comply with the Californian requirements.

For more information, please contact one of our Sales Associates for details.
