EN 303 345 for AM, FM, DAB & DRM Broadcast Sound Receivers Published in EU's Official Journal

Since June 2017 almost all radio transmitters and receivers sold or put into operation in the European Union must be tested for immunity against interferers in adjacent frequency bands. ETSI standard **EN 303 345** defines the tests to be performed on broadcast sound receivers, and the requirements to be passed.

In March 2022, Parts 3 & 4 of this standard had been added to the Official Journal (OJ) for publication.
