SGS Hong Kong Softlines Laboratory to provide Material Testing on Textile Products Containing Lenzing's Fibers

In recent years, sustainability has become a major trend in the textile industry. It is about more than the use of biobased materials and better working conditions. The consumption of water, energy and chemicals poses challenges for textile companies at every stage of the value chain.

Due to the rising concerns regarding environmental degradation and climate change around the world, companies are shifting towards environment-friendly and biodegradable fibers, which offers a lot of advantages such as the reduction of plastic waste and reduction in the cost of waste management.

Lenzing Fibers (Hong Kong) Ltd. confirmed, starting on 1 April 2022, SGS Hong Kong Ltd. as a provider of testing for textile applications using Lenzing's fibers.

Mr. Rex Mok, VP Global Technical & Marketing Dev. General Manager, with Mr. Willie Lau & Ms. Louise Law, Senior Manager & Laboratory Manager at SGS Hong Kong (Softlines Department).

SGS offers a wide range of services to the Softlines and accessories industry, at every stage of the value chain, ensuring the quality, safety and sustainability of these products, and their mode of distribution, to satisfy regulatory requirements as well as the demands of the market.

* The test results are provided pursuant to the terms and conditions of SGS
